

**New Medicine Interventions – Your Experiences**

Think of the best example of where you gave advice/did an intervention on a new medicine (i.e. a medicine not taken by that patient before).

1. What was the medicine?
  
2. What was the medicine for? Therapeutic group?
  
3. How was the intervention made? Patient request or when giving brief advice on handing out medicines
  
4. Was the consultation face to face/over the phone/via carer?
  
5. What was the query relating to?
  
6. What intervention and/or brief advice did you give?
  
7. Where did you find the information to provide the advice or guide your intervention? E.g. your knowledge or what reference sources?
  
8. Did you record this intervention on the PMR?
