

### Case Study for asthma MUR

Miss Thomas is a 25 year old lady who comes into your pharmacy for an MUR.

She is a regular asthmatic patient.

### PMH

Salbutamol Easi-breathe Inhaler 100mcg 2 puffs PRN x2

Becotide Inhaler 100mcg 2 puffs BD x 1

Salmeterol Evohaler 25mcg 2 puffs BD x1

You check Mrs Thomas' inhaler technique and she is using them correctly.

1. What questions could ask about her regime to establish she is concordant with her medication?
2. See attached MUR paperwork. What action points could you make from her answers and how would you word them on the form?
